

NEW

LEAP

The interior design of a modern office is unthinkable without new technologies and materials. Metal and glass, fresh constructive ideas, unusual proportions of colours and textures are the distinctive features of the new aesthetics furniture. JANE Collection by **SummitTime** was created with consideration of the leading world design tendencies and can become a real catch for your office project.

The specific trait of this series is the metal framework that highlights the strict minimalistic shape and colour of the furniture. Outstanding structure and a pleasant color of walnut veneer make the furniture from JANE collection so elegant and inimitably gorgeous.

LEAP

Metal framework is an innovative solution designed by our company individually for JANE Collection. This construction highlights the strict beauty of the furniture shapes, most stunning in the desks of our collection.

Due to their assembly construction, tables can be equipped with motorized height adjustment system. Sit to Stand system supports alternative postures and individual working styles. A memory function holding three positions, which adjusts the table height from 700 mm to 1300 mm in just few seconds.

LEAP

JANE Collection presents a great variety of modular conference tables. With these tables you can create a gorgeous meeting zone in your office.

Graceful "sharp" edges of the tables, the opportunity to select their sizes and shapes, bring the sense of lightness and beauty together with constructability and mobility into the office environment – the traits so typical for the best trends of the modern design.
