**sound insulation**

high quality seals. thick walls. Good soundproofing

**Workplace**

80 x 30 cm table surface with socket, USB and LAN built into the table.

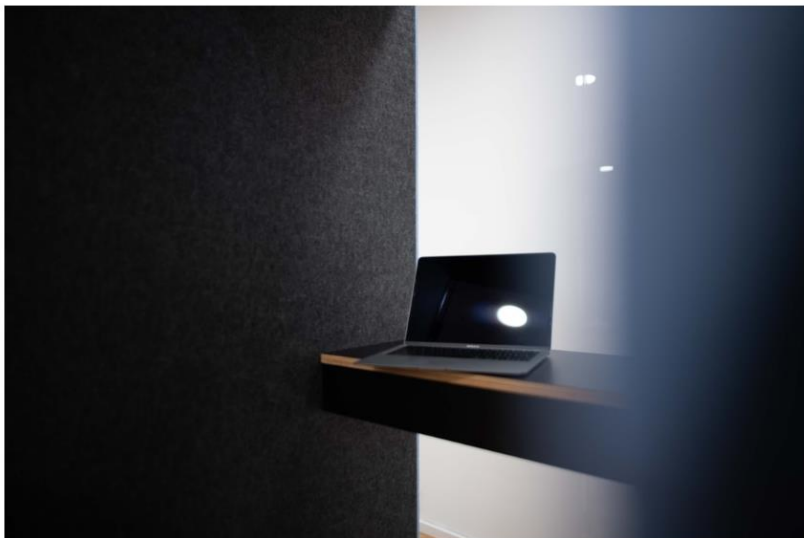

Patented Innovations  
Air System

---

Patented innovations make the acoustic room a happy and comfortable place. It's always quiet inside and the air is always fresh.

## Workplace

The 80x30 cm table made of birch plywood with a black HPL surface not only looks stylish. – You also have a lot of space to work.

## ventilation

Two large fans provide plenty of fresh air. The fresh air flows into the telephone box at the top. The used air is sucked out again through the ventilation grille in the floor. Air inlet and outlet both have a so-called acoustic trap. This is a crooked construction in the respective module, which prevents the penetration of sound. Essential for good soundproofing.

## electrics

With us there are no add-on options, only the full equipment! Integrated in the table is 1x socket, 2x USB and 1x LAN. In addition, the LED and ventilation are controlled by a motion sensor. When you enter your chill telephone box, the light and the ventilation come on. When leaving, the fans continue to run automatically until all the used air has been removed.

## outer lining

The key aspect in the design of our telephone box was to create an extremely high-quality telephone box. Our regular exterior cladding consists of acoustic felt elements. The elements can simply be clipped on. Duration 10 seconds. You have a high-quality look without seeing the screws of the construction. And if you feel like it, you can change the color every week!

# chill four

Made for meetings that just can't wait. Chill Four is an elegant meeting room where you can hold meetings with your team. Designed for comfortable work in small spaces. Maximum flexibility, incredibly quiet and with a pleasant supply of fresh air. Just right for team players who have big plans.

## chill four

### Furnishing

- ✓ 2x socket, 4x USB & 2x LAN
- ✓ Lockable door with 3x keys
- ✓ 4-fold ventilation
- ✓ 2x 3500 K LED with motion sensor
- ✓ 2x sofas and 1x table

### dimension

Outside: 220 x 220 x 120 cm (h, w, d)

Inside: 206 x 200 x 112 cm (h, w, d)

### **LED light**

3,500 K lamp provides a pleasant light.

### **Ventilation**

4x large fans provide air supply and that quietly.

### **Glass elements**

Light-flooded interior through 2 glass sides.

### **Sound insulation**

high quality seals, thick walls. Good soundproofing

### **Acoustics**

Excellent and beautiful sound. Simply because it is important.

### **Workplace**

Sofas, table & Co. make Chill the ideal meeting place for 4 people

## Workplace

Meetings require space. We know this! A large 80x60 cm table offers space for several laptops and accessories. The birch plywood table top has a white HPL surface and is therefore super robust.

## electrics

Chill Four offers plenty of connections in a convenient location. 1x socket, 2x USB and 1x LAN are integrated in each sofa. In addition, the 2x LED and 4x fans are controlled by a motion sensor. When you enter your chill meeting box, the light and ventilation go on. When leaving, the fans continue to run automatically until all the used air has been removed.

## ventilation

The basic principle of ventilation works similar to the telephone box for one person. Four large fans provide plenty of fresh air. Fresh air flows into the inside of the Chill Meetingbox via the two ventilation inlets on the top. The old air is extracted below via the ventilation grilles. "Acoustic traps" are again installed in each element to prevent sound leakage. The result: Plenty of fresh air without worsening the soundproofing. Just awesome!

## couches

Two comfortable sofas create space for up to 4 people in the chill meeting cabin. The sofas are 110 cm wide, so 2 people can easily sit on each side. An electrical unit with 1x socket, 2x USB and 1x LAN is installed in each of the sofas. – Everything within reach.

## outer lining

The key aspect in the design of our telephone box was to create an extremely high-quality meeting cabin. Our regular exterior cladding consists of acoustic felt elements. These elements can simply be clipped on. Duration 10 seconds. You have a high-quality look without seeing the screws of the construction. And if you feel like it, you can use a color spray every week!

# Particularities

Our core product design philosophy is to create a phone box that combines good soundproofing, quality and design. - At a great price. The construction of the phone box has so many special features that make a huge difference in everyday use.

# What Makes Chill So Much Better?

Cup holders and notepads in the phone box are nice touches. But what counts in the end is a good product that is actually used in practice. Here we compare the main technical requirements between Chill and other products in the same price range that every phone booth should have.

technical requirements	chill	Other
electricity	Yes	Yes
good interior acoustics	Yes	No
stable construction	Yes	No
Acoustic glass door and back panel	Yes	No
soundproof door construction	Yes	No
soundproof ventilation system	Yes	No
sound absorbing exterior	Yes	No
stylish design ;-)	Yes	No
