FOCUS SPACES

The Original

studiobricks
The Booth

We are experts at sound controlled & portable working spaces. Thanks to the patented isolated brick system we have been increasing freedom and comfort in offices and homes for more than 10 years all over the world.

Studiobricks S.L. is an innovative company with a vivid history. Its origins go back to 2008 when the first Studiobricks booth was built out of the personal need of its founder Guillermo Jungbauer. He needed a rehearsal room with good acoustics to play his saxophone without bothering his neighbours. The first bricks for the now patented Studiobricks modular system were developed with acoustic engineers. Success was there from the beginning. In November 2008 Studiobricks S.L. starts to operate with a solid and independent growth.

The Original Studiobricks booths are all produced in our own factory in Lliçà de Vall, close to Barcelona (Spain) with our head office right above the production line. This way we have full control of the product development.

Studiobricks serves to three main markets:

Music & recording

Office solutions

Audiology

Please visit our website for more information about our different commercial lines.

Excellent sound insulation

STUDIOBRICKS takes care of silence and offers you the freedom you need through our many years of expertise in sound controlling.

Our booths are built of high performance sound isolating materials. We provide you with a two-way sound isolation:

1. no external noise in the cabin and
2. inside conversations cannot be overheard from outside

Please see on our webpage the measurement reports for each product. Pleasant internal room acoustics are obtained thanks to special acoustic absorbers.

Fire Safety

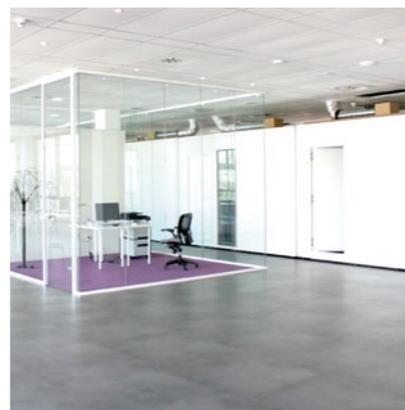

Our Studiobricks Office Solutions are manufactured with fire retardant materials to suit fire protection requirements.

Customized solutions

With our STUDIOBRICKS OFFICE SOLUTIONS you have all the possibilities you need and can freely choose the booth that best suits the space and needs you have:

- Divide a huge space into several small ones.
- Add a sound-controlled space in a huge and noisy industrial surrounding.
- Choose a colour from any RAL colour.
- Add your logos. We offer branding options and custom-made design solutions (e.g. design in line with CI guidelines or adaptation to existing office environment).
- Whatever space you have, our cabins can adapt in size –up to 50m² (538 ft²) / booth.
- Put the windows and doors wherever they best serve you and change their position later on.

Well-chosen materials

- High quality booths. The best for a long life product.
- Well-chosen eco-friendly materials.
- Glues: layers are only stuck together with wood glue, acoustic absorbers inside are fixed with water-based adhesive.
- Water-based paint, no use of solvents.
- No use of mineral wool or similar absorbing materials.

Quick & easy to assemble

The Studiobricks sound isolation booths can be built in minutes and just as easily dismantled and relocated should the need arise.

Our booths are designed this way without compromising the booth's excellent sound isolating properties thanks to the modular panels which are built of high performance sound isolating materials and can simply be slotted together.

The patented tongue-and-groove design enables easy assembly and prevents sound from escaping between the panels.

Design & flexibility

Appealing:
The proportions of our design look appealing. Our sound-controlled spaces serve as furniture which enrich and decorate your work environment.

Flexible:
Thanks to our patented modular system you can place the windows and doors in different positions (FOCUS booths) and also change their position later on. Besides our standard design in white (FOCUS booths), you can order our booths in all available RAL colours and have our phone booths as real eye catchers. You can relocate our HOLA, HELLO and HALLO booths easily thanks to their casters.

Flexible investment

With our booths your investment is flexible since you can take the booths with you easily should the need to move arise. Also, our FOCUS SPACES can be made smaller or bigger after you've bought them. You just add some bricks or take them away.

wework®

We have a strong relationship with the team of the coworking company **WeWork**. Together we created this phone booth with unique design initially having the German phone booth model "TelH78" from 1978 as objective. These booths are being installed in the US and all over Europe in WeWork buildings.

Working booths

studiobricks
The Booth

Focus on
what matters.

Working Booths

100% freedom, 0% disturbances

Our working and meeting booths have the highest sound isolation in the market. Thanks to our long experience of specialisation in sound proofing we offer you comfortable silence to focus on what matters. These booths have a special sound control glass door and stand on so called silent blocks. You can add windows to achieve more visibility or enjoy comfortable privacy for high concentration work, phone calls & video conferences. For up to two people.

Multiple configuration possibilities

Besides our standard configuration (see each product) there are many possibilities for designing the booth your way, such as:

- Customizable colour inside and outside the booth (select from all RAL colours ralcolor.com)
- Branding options
- Add windows
- Different window & door positions
- Seat options
- Wheelchair access possible with different glass door (magnet anti panic closing) and ramp
- Special coating: Special resistant acrylic surface for use at trade fairs and road shows with frequent assembly and disassembly
- ON AIR signal: Lights up to signal occupancy. With a motion sensor
- iPad/tablet holder with 3 positions for video conferences with mobile phone or tablet

Please download our product data sheets online to get information about the current extras.
